New regional records and conspectus of the genus *Corydalis* DC. (Papaveraceae) in Mongolia

Новые региональные находки и конспект рода *Corydalis* DC. (Papaveraceae) в Монголии

Summary. This is a revision of the taxonomic composition of the Mongolian genus *Corydalis* DC. At present, there are 10 species and 2 subspecies of the genus in the flora of Mongolia. New species (*Corydalis sayanensis* Peschkova) is written in the flora of Mongolia, again one species was added (*C. schanginii* (Pall.) B. Fedtsch.). Here the species composition of the genus *Corydalis* DC. of the vascular flora of Mongolia is presented according with changes in new conspectus (Urgamal et al., 2014). We added 4 species on phytogeographical records of new regions included in the vascular flora of Mongolia.

Реферат. В статье представлен пересмотр таксономического состава рода *Corydalis* DC. из Монголии. В настоящее время во флоре Монголии насчитывается 10 видов и 2 подвида рода. Новые виды (*Corydalis sayanensis* Peschkova) отмечены в флоре Монголии с добавлением одного вида (*C. schanginii* (Pall.) B. Fedtsch.). Здесь представлен видовой состав рода *Corydalis* DC. сосудистой флоры Монголии в соответствии с изменениями в новом конспекте (Urgamal et al., 2014). Мы добавили 4 вида к фитогеографическим записям новых регионов, включенных в сосудистую флору Монголии.

Introduction

The genus *Corydalis* DC. (Papaveraceae Jussieu, 1789) is little known taxonomically in Mongolia. Grubov (1982) first registered 5 species, later Ulzijkhutag (1984) added 3 species, Gubanov's conspectus (1996) included 7 species, 4 subspecies and at the last Urgamal et al. (2014) registered 10 species of the genus in the flora of Mongolia (Table 1). Currently, our paper includes 10 *Corydalis* species and 2 subspecies. In 2013 we added new collections of *Corydalis sayanensis* Peschkova. The taxonomy of the genus *Corydalis* in Mongolia is revised here.

Table 1

History of the genus *Corydalis* species number in the flora of the Mongolia

Sources and references	Species and subspecies number
Grubov V. I. (1982)	5
Ulzijkhutag N. (1984)	8
Gubanov I. A. (1996)	11
Urgamal et al. (2014)	10
At present (in this paper)	12

Material and Methods

The *Corydalis* specimens from the Herbarium of the Institute of general and experimental Biology (UBA), Mongolian Academy of Science, the Herbarium of the National University of Mongolia (UBU), The Herbarium of the Central Botanical Garden of Siberia (NS, NSK), Russian Academy of Science as well as additional data, were used for the study. In a totaly, over 600 sheets of specimens collected by numerous scientists during a period from between 1896 to 2014 years were studied. The nomenclature and taxonomy follow works of Lidén Magnus (2008).

Results

The taxonomy of *Corydalis* in Mongolia is revised here. Currently 10 species and 2 subspecies are listed for Mongolia. In the conspectus of Gubanov (1996), two species (*C. schanginii* (Pall.) B. Fedtsch., *C. sajanensis* Peschkova) have been added. It's revealed that 10 species and 2 subspecies occur in the flora of Mongolia at present. This is the revision of the phytogeographical regions composition of the Mongolia which was based on the Herbarium (UBA). The distribution data was carried in phytogeographical regionalization (Grubov, 1982) of the Mongolia (Table 2). According to our research work there have been identified new regional records for 4 species of the *Corydalis* in Mongolia. In totally, the following genera of *Corydalis* DC. are known to occur in Mongolia. As result since of Urgamal et al. (2014) new species have been added (Table 3).

CONSPECTUS OF THE GENUS *CORYDALIS* DC. 1805 OF MONGOLIA

Fl. Franz., ed. 3, 4: 637. 1805

Symbols: # - new combination,

+ - new species added,

6+ - new region records.
